MULTI SITE

Multi-site makes it possible for you to keep an overview of your Items also at different sites and use them optimally.

Multisite -

With the easyjob Multi-site module, you are able to optimally schedule your Items among your various stock locations. When booking items, you can see how much is available and at which sites. If there is an availability or supply conflict, an intelligent tool will offer the most economic alternative solution in real time (either a transfer from another site or an external sub-rental). With authorizations you are able to control which user should carry out which activity at which site.

Please contact the Sales department for the easyjob Multi-site manual.
